

Solar Panels Installation

From Installers You Can Trust

The Simple Energy Solar Installation Process in 6 easy steps

Site Survey

Simple Energy creates a custom panel layout for you based on an assessment of your roof.

Submit for Permits

We then submit the solar system design layout for permits to your local jurisdiction.

Install Net Meter

While we wait, we work with your utility company to get your Net Meter installed.

HOA Approval

Your solar expert will also work with your HOA to get approval if necessary

Installation Day

When we've received the green light from all parties, we move forward with installing your solar panels.

Go Live!

When we receive "PTO" (Permission to operate) from your utility company and after your net meter has been installed, your solar panels will be fully operational. It's that simple!
